SAN GABRIEL VALLEY CLEANUP PROGRAM – GROUNDWATER SAMPLING AND
ANALYSES AT TRI-FITTING MANUFACTURING COMPANY LOCATED AT 10414
RUSH STREET, SOUTH EL MONTE, CA (FILE NO. 107.0795)

Dear Mr. Levin:

In our letter dated September 28, 1999, we conditionally permitted you to implement the remedial plan for the subject site. One of the conditions is for you to update groundwater data by providing us with elevation measurements and water quality data for all three groundwater monitoring wells at the site.

You shall analyze groundwater samples for chlorinated volatile organic compounds and the emergent chemicals including perchlorate, n-nitrosodimethylamine (NDMA), and 1,4-dioxane. Appropriate detection limits shall be employed for the analyses of these chemicals. The detection limits for the emergent chemicals are as follow: perchlorate – 4 ppb; NDMA – 0.033 ppb; and 1,4-dioxane – 3 ppb.

If you have any questions regarding the above, please call me at (213) 576-6727.

Sincerely,

E.G. SOLOMON

Associate Engineering Geologist
